## PROFILE

Portfolio: [www.mihir.space](http://www.mihir.space)  
Capstone Project: [ionicskies.com](http://ionicskies.com)

UC Santa Barbara 2021  
B.S. Electrical Engineering  
3.66

---

## COURSEWORK

Analog Circuit Design  
Computer Vision  
Digital Design  
Digital Signal Processing  
Electromagnetism  
Linear Systems (Graduate)  
Nonlinear Dynamics  
Probability & Statistics  
Semiconductor Devices

---

## HARDWARE

PCB Design  
Switching Circuits  
Linear Amplifiers  
Arduino, Raspberry Pi  
3D Printing, Machining  
Composites  
AVR & STM microcontrollers

---

## SOFTWARE

Python(numpy, keras, opencv,  
pytest, logging, multithreading)  
Embedded C  
Matlab  
Jupyter Notebook  
Git, Makefiles, Bash  
Kicad + Eagle  
Solidworks + Inventor  
LaTEX

---

## WORK EXPERIENCE

### Tesla

Thermal Integration Intern  
06/2020 - 09/2020

- Built up software infrastructure for automated testing and validation of semi-truck thermal systems using thermal buck
- Designed automated thermal buck self test with component level and system level parts to verify that all systems are operational before more complex tests
- Used Jenkins, CAN+UDS protocols, SCPI, interlock circuits, high power cabling, and various python libraries - pyserial, logging, pytest, threading, internal libs

### CTRL-Labs (now Facebook Reality Labs)

Hardware Engineering Intern  
06/2019 - 09/2019

- Worked on analog front-end(AFE) of electromyography armband that decodes physical muscle movement from signals travelling through neurons in the arm
- Proposed and executed AFE biasing voltage changes that save space, power, and complexity, extensively verified and analyzed results in Jupyter Notebook
- Performed oversampling experiments to verify SNR improvements, uncovered and diagnosed SPI timing issues that were exacerbated at higher sampling rates

---

## LEADERSHIP EXPERIENCE

### Ionic Skies (in progress!) - [ionicskies.com](http://ionicskies.com)

Capstone Project Lead  
03/2020-Present

- Started and grew 17 person interdisciplinary capstone team building ionic wind aircraft
- Directly technically involved in characterization and development of ionic thrusters, DC-DC power converter, and integration with airframe and launcher
- Developing understanding of HV electrostatics & corona discharges, high frequency switching circuits & PCB layouts, aircraft design principles, and project management

---

## PERSONAL PROJECTS

### Ball Balancing Robot (BB-9)

- Robot that balances on a spherical wheel - a soccer ball
- Omni-directional wheel rotation
- Acc+gyro sensor fusion thru complimentary filter, and PID controller achieves robust balance
- Learned PCB design, reflow soldering, Kalman filtering, Lagrangian mechanics, and wrote I2C driver along the way

### And More

- Bamboo bike
- Weight sensing electric longboard
- 3-axis CNC router
- Built my personal website [www.mihir.space](http://www.mihir.space) using HTML, CSS, and Bootstrap; features pictures and videos of all my projects!
